

AIRBUS

AIRBUS POLAND S.A.

ENERGY POLICY

AIRBUS POLAND S.A. provides services in the design, production, and servicing aircrafts as well as testing electrical harnesses in the space sector.

The energy policy implemented through the Energy Management System in AIRBUS POLAND S.A. according to the international standard ISO 50001 is consistent with the strategy of functioning and development of the company, which is guided in its activities by the principles of energy efficiency.

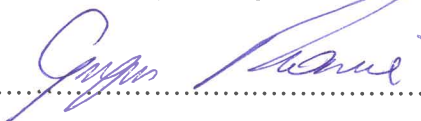

We pay attention to the rational use of fuels and other energy media with the principles of safety of energy supply to our technological lines, therefore we focus our activities on:

- Implementation, maintenance, and continuous improvement of the Energy Management System in accordance with the international standard ISO 50001 as well as improvement of energy performance,
- To comply with applicable legal requirements and other related to energy consumption and use,
- Conduction energy management, including rational use of raw materials, material, fuels, energy, and water,
- Ensuring the availability of information and resources necessary to achieve the energy objectives and targets,
- Analyzing the possibilities of improving energy performance when designing and/or modifying equipment and processes that use energy which can have a significant impact on its energy performance throughout its life cycle,
- Enhance the energy awareness of all employees and engaging them in continuous improvement of the energy performance and the Energy Management System.

We achieve our goals by:

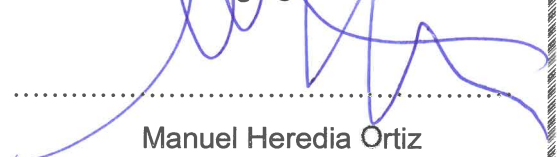

- Complying with applicable legal requirements and other requirements,
- Providing funds for investments and other activities aimed at improving the energy performance,
- Recognizing energy intensity as one of the purchase and investment criteria,
- Systematically improving the production process introducing modern technical and technological solutions in order to continuously improve quality and productivity while striving to reduce energy consumption,
- Optimizing the use of raw materials and media and conducting rational energy management,
- Limiting the risk of failure related to uncontrolled energy consumption,
- Supervising companies and persons performing for us or on our behalf services on the premises of the plant which may have a significant impact on the energy result and Energy Management System.

Plenipotentiary
for the Energy Management System

Grzegorz Prawica

President of the Management Board
